GOAT TRAINING MANUAL

RESULTING APPOINTMENTS & MOVING THE PIPELINE

Every appointment gets one result, and every result gets reported to Amy the moment the appointment ends. This is what each result does to your pipeline, and how all of it rolls up into your opportunity, demo-to-opp, and closing rates.

HOW RESULTING WORKS

Read this part twice. It is the whole system in one idea.

You never set an appointment result by hand, and you never add tags. Every result is a consequence of one of three things — and all three are simple. Do the right one and the appointment status, the opportunity status, and the pipeline stage update themselves.

Action A

Sign the purchase agreement

This is how a **Sold** gets recorded. Signature fires the automation.

Action B

Send the estimate

This is how a **DNS** gets recorded. Sending fires the automation.

Action C

Report the result to Amy

Every appointment, every result, the moment it ends. Amy adds the tag that records it.

WHO DOES WHAT

Three parties touch every appointment. Staying in your lane is what keeps the numbers clean.

You — Advisor

Sell it, then report it

Run the appointment. Sign the agreement or send the estimate. Then tell Amy the result — immediately, every time, including the ones that sold.

Amy — Appointment Manager

Owns the tags

Amy adds every tag in GOAT based on what you report. Advisors do not add tags. If a tag is wrong, tell Amy — do not fix it yourself.

GOAT — the CRM

Sets the statuses

The signature, the estimate, and Amy's tags each fire automations that set the appointment result, the opportunity status, and the stage.

REPORT IT BEFORE YOU LEAVE THE DRIVEWAY

"Immediately" means as soon as the appointment ends — not at the end of the day, not the next morning. Amy cannot tag what she has not been told, and an untagged appointment sits in the pipeline looking like it never happened.

Report the result even when there is nothing for Amy to tag. **Sold** and **DNS** record themselves off the agreement and the estimate, but Amy still needs to know where every appointment landed.

THE SEVEN RESULTS

Every appointment ends in exactly one of these. The three fields under each name are what GOAT will show once the automation runs — you do not touch them. The tags are listed so you know how your result gets recorded, not so you can add them.

SOLD

OPPORTUNITY

The customer bought.

APPOINTMENT	OPP STATUS	STAGE
Showed	**Won**	**New Sale**

1. Get the purchase agreement **signed**.
2. Report "**Sold**" to Amy as soon as the appointment ends.
3. The moment it is signed, the opportunity moves to `Won` and into the `New Sale` stage, and the appointment is resulted `Showed`. AUTOMATIC
4. No tag is needed for this one — the signature does the work.

DNS

OPPORTUNITY

Did Not Sell — you demoed, they didn't buy today.

APPOINTMENT	OPP STATUS	STAGE
Showed	**Open** (unchanged)	**Rep Working**

1. **Send the estimate.**
2. Report "**DNS**" to Amy as soon as the appointment ends.
3. On send, the opportunity moves to the `Rep Working` stage and the appointment is resulted `Showed`. AUTOMATIC
4. The opportunity stays `Open` — it is still live and still yours to close.

NO SHOW

NOT AN OPPORTUNITY

Nobody was there.

APPOINTMENT	OPP STATUS	STAGE
No Show	**Open** (unchanged)	**Reset**

1. Report "**No Show**" to Amy right away. Nothing happens until she hears from you.
2. Amy adds the tag `no show`.
3. The tag moves the opportunity to the `Reset` stage and results the appointment `No Show`. AUTOMATIC

ONE LEG

NOT AN OPPORTUNITY

Only one decision-maker was present.

APPOINTMENT	OPP STATUS	STAGE
No Show	**Open** (unchanged)	**Reset**

1. Report "**One Leg**" to Amy right away.
2. Amy adds the tag `one leg`.
3. The tag moves the opportunity to the `Reset` stage and results the appointment `No Show` — same handling as a No Show. AUTOMATIC
4. **Preventable.** Confirm the full buying committee when the appointment is set and again when it's confirmed. See Estimate rules.

INC. TIME

OPPORTUNITY

Inconvenient time — the committee was there, but you never got to sit down.

APPOINTMENT	OPP STATUS	STAGE
Invalid	**Open** (unchanged)	**Reset**

1. Use this when **the whole buying committee was present** but you gave no demo and no price — the contact was tied up, not feeling well, or otherwise could not sit down. The appointment has to be reset.
2. Report "**Inc. Time**" to Amy right away.
3. Amy adds the tag `inc time`.
4. The tag moves the opportunity to the `Reset` stage and results the appointment `Invalid`. The opportunity stays `Open`. AUTOMATIC
5. **This one counts as an opportunity.** Same Reset workflow as No Show and One Leg — but the committee was in front of you, and that is the whole difference.

NOT QUALIFIED

NOT AN OPPORTUNITY

The lead never should have been set.

APPOINTMENT	OPP STATUS	STAGE
Invalid	**Abandoned**	**—**

1. Report "**Not Qualified**" to Amy — and tell her **which reason**: credit, doesn't own, out of area, or repair only. See the five NQ reasons.
2. Amy adds the NQ tag that matches that reason.
3. The tag marks the opportunity `Abandoned` and results the appointment `Invalid`. AUTOMATIC
4. Note the split: `Invalid` is the **appointment** status, `Abandoned` is the **opportunity** status. They are two different fields.

NOT INTERESTED

OPPORTUNITY

Qualified, no price ever given — they just said no.

APPOINTMENT	OPP STATUS	STAGE
Invalid	**Lost**	**—**

1. **Only available if you never gave a price.** If an estimate went out, this result does not exist — it is a DNS. See Estimate rules.
2. Report "**Not Interested**" to Amy right away.
3. Amy adds the tag `not interested`.
4. The tag marks the opportunity `Lost` and results the appointment `Invalid`. AUTOMATIC
5. **This one still counts as an opportunity** even though the appointment is Invalid. An Invalid appointment is not the same thing as "not an opportunity." See How you're measured.

THREE RESULTS LAND IN RESET — ONLY ONE OF THEM COUNTS

No Show, One Leg, and **Inc. Time** all run the same workflow and all end up in the `Reset` stage waiting to be rescheduled. Do not read that as "these three are the same."

Inc. Time is an opportunity. No Show and One Leg are not. The dividing line is whether the buying committee was in front of you. On an Inc. Time it was — you just never got to sell. That is a real selling situation that fell through on timing, and your numbers should say so.

QUICK REFERENCE

The whole manual on one screen. Print it, tape it to the dash. You own the first two columns — everything to the right of them happens without you.

RESULT	YOU DO	YOU REPORT	AMY TAGS	APPOINTMENT	OPP STATUS	STAGE	OPPORTUNITY?
SOLD	Sign the purchase agreement	"Sold"	—	Showed	Won	New Sale	**Yes**
DNS	Send the estimate	"DNS"	—	Showed	Open	Rep Working	**Yes**
NO SHOW	*Nothing in GOAT*	"No Show"	`no show`	No Show	Open	Reset	**No**
ONE LEG	*Nothing in GOAT*	"One Leg"	`one leg`	No Show	Open	Reset	**No**
INC. TIME	*Nothing in GOAT*	"Inc. Time"	`inc time`	Invalid	Open	Reset	**Yes**
NOT QUALIFIED	*Nothing in GOAT*	"Not Qualified" + **the reason**	One of the five NQ tags	Invalid	Abandoned	—	**No**
NOT INTERESTED `no price given`	*Nothing in GOAT*	"Not Interested"	`not interested`	Invalid	Lost	—	**Yes**

The gate on the last row: Not Interested is only on the table if no price was ever given. Once an estimate goes out, the only two results left are Sold and DNS.

Two different fields: "Appointment" and "Opp status" are separate. Not Qualified sets the appointment to `Invalid` and the opportunity to `Abandoned` — not the same value in both columns.

RESCHEDULING ON THE SPOT

An **Inc. Time**, **No Show**, or **One Leg** can be rebooked with the customer right there, before you report anything. That is encouraged — but it does not change how the appointment you were just on gets handled.

> **THE APPOINTMENT YOU WERE ON IS FINISHED — NEVER EDIT IT**
>
> It still gets its result exactly as described above. **Do not edit that appointment** and do not move its date. A rebook is a **brand-new appointment**, created from scratch.
>
> And it is created by **Amy, not you.** Advisors do not create appointments in GOAT. Give her the day and time you agreed to along with your result.

First

The tag goes on

Amy tags the appointment you were on — `inc time`, `no show`, or `one leg`. The old appointment gets its result and the opportunity lands in `Reset`.

Then

The new appointment gets created

Only once the tag has landed does Amy build the new appointment for the date you agreed to. The opportunity moves forward from `Reset` cleanly.

ORDER MATTERS — DO NOT FLIP IT

Tag first, new appointment second. Every time. If the new appointment is created before the tag lands, the automations fire against the wrong record and the opportunity ends up in the wrong stage — which then has to be untangled by hand.

When you report a rebook, report it in that order too: **the result first, then the new date and time.**

ESTIMATE RULES

The estimate is the hinge of the whole scoreboard — it ends the demo-to-opp calculation and starts the closing-rate one. Two rules, no exceptions.

RULE 1 — ONCE AN ESTIMATE IS SENT, THE ONLY RESULTS ARE SOLD OR DNS

Sending an estimate locks the appointment. It cannot be marked No Show, One Leg, Inc. Time, Not Qualified, or Not Interested after that point — you demoed a real, qualified customer, and the numbers have to say so. Do not ask Amy to tag it otherwise; she cannot, and it would be wrong if she could.

If you gave a price, it can never be Not Interested. The `not interested` tag is for customers who never got one. Once a price is out, the customer is a **DNS** — full stop, no matter what they say when they turn you down.

RULE 2 — ONE ESTIMATE PER APPOINTMENT

Never send a second estimate for the same appointment. If product needs to be added, removed, or swapped, **edit the estimate you already sent**.

A second estimate double-counts in your demo-to-opp and closing rates and makes your numbers look worse than your selling actually is.

"BUT THEY TOLD ME THEY'RE NOT INTERESTED"

Understood — and it is still a DNS. A customer who has your price and passes is not a dead lead, they are a priced opportunity who said no *today*. That is a different situation from someone who never saw a number, and we work it differently.

Report it as a DNS and hand it off. There is a separate follow-up process for priced customers who pass — it does not run off the `not interested` tag, and tagging it that way takes them out of it.

"I SENT THE ESTIMATE, THEN FOUND OUT THEY'RE NOT QUALIFIED"

Same answer: it is a **DNS**. The result does not change and the appointment does not get re-tagged. That one is on you, and the number will say so.

Qualifying is **discovery work, and it happens before the demo** — not after the price is out. All four NQ reasons are answerable with questions you can ask up front: can they fund it, do they own it, are we in their area, is this a replacement or a repair. If you got to the estimate before you knew the answers, the discovery was too thin.

One Legs are the same story. Confirm the whole buying committee will be there when you set and when you confirm. A One Leg you discover at the door is a conversation you didn't have on the phone.

Nobody is going to relabel a result to make a month look better. The fix is upstream: ask harder in discovery and these stop showing up.

FILL IN — THE POST-ESTIMATE "NO" PROCESS

What happens to a DNS whose customer has explicitly passed after seeing a price. Add the steps here so advisors know where the lead goes:

- Who owns the follow-up, and from when
- What cadence or campaign it enters
- What the advisor does to trigger it

EXCEPTIONS

The two situations that trip advisors up most.

NO APPOINTMENT ON THE RECORD

Sometimes there is no appointment to result — the lead was worked without one ever being set. Report it to Amy the same way. When she adds `not interested` or an NQ tag, **everything else still happens**: the opportunity is still marked `Lost` or `Abandoned`. The only step that does not happen is the appointment result, because there is no appointment to result.

NOT INTERESTED VS. NOT QUALIFIED

Not Qualified means the appointment should never have been set — bad credit, they don't own the home, it's outside our area, or they only want a repair. It does not count against you.

Not Interested means the lead was legitimate, no price was ever given, and the customer passed. It *does* count as an opportunity. Do not report a real "no" as Not Qualified to protect your numbers — Amy tags what you tell her, so a bad report becomes bad data, it distorts the setter numbers, and it shows.

And if a price went out, neither one applies. That is a **DNS**.

THE NOT QUALIFIED REASONS

There are five NQ tags and Amy picks from them based on the reason you give her. Learn the four specific ones — reporting "just NQ" throws the lead into the catch-all and tells us nothing about where bad appointments come from.

WHAT YOU TELL AMY	TAG SHE ADDS
They didn't qualify on credit. Financing was declined or they can't fund the job.	`not qualified credit`
They don't own the property. Renter, tenant, or anyone who can't authorize work on the home.	`not qualified does not own`
The property is outside our area. We don't service it, whatever the condition of the roof.	`not qualified out of area`
They only want a repair. Not a replacement job — a repair-only request.	`not qualified repair`
Something else disqualified it. Use this only when none of the four above fit — and tell Amy what actually happened so we can spot a pattern worth its own tag.	`not qualified`

SAY THE REASON, NOT THE LABEL

Report it as "**Not Qualified — they don't own it**" or "**Not Qualified — out of area**," not just "NQ." Amy can only tag what you tell her, and the specific tags are what let us fix the source: a run of `not qualified out of area` is a targeting problem, a run of `not qualified credit` is a pre-screening problem. They get fixed in completely different places.

HOW YOU'RE MEASURED

Three rates are calculated straight off the results above. Resulting correctly is not paperwork — it *is* your scoreboard.

COUNTS AS AN OPPORTUNITY

SOLD · DNS · INC. TIME · NOT INTERESTED

DOES NOT COUNT AS AN OPPORTUNITY

NO SHOW · ONE LEG · ANY NOT QUALIFIED

OPPORTUNITY RATE

$$\frac{\text{Opportunities}}{\text{Appointments}}$$

How many of the appointments on your calendar turned into real selling situations.

DEMO TO OPP RATE

$$\frac{\text{Estimates sent}}{\text{Opportunities}}$$

How often you actually put a price in front of a real opportunity.

CLOSING RATE

$$\frac{\text{Sales}}{\text{Estimates sent}}$$

How often a price in front of a customer becomes a signed job.

WORKED EXAMPLE — ONE ADVISOR, ONE MONTH

20 appointments. Results: 4 Sold, 7 DNS, 1 Inc. Time, 2 Not Interested, 3 No Show, 1 One Leg, 2 Not Qualified. That is **14 opportunities** (4 + 7 + 1 + 2) and 6 that don't count. **11 estimates** were sent and **4** became sales.

OPPORTUNITY RATE	DEMO TO OPP RATE	CLOSING RATE
70%	**78.6%**	**36.4%**
14 ÷ 20	11 ÷ 14	4 ÷ 11

ADVISOR CHECKLIST

Run this before you leave the driveway. Every appointment, every time.

- [ ] **Amy has the result** — reported the moment the appointment ended, not at the end of the day.
- [ ] You picked **one** result for the appointment — not two, not none.
- [ ] If it sold, the **purchase agreement is signed** in GOAT. Nothing else needed.
- [ ] If it's a DNS, the **estimate is sent** — one estimate, not two.
- [ ] If a price went out, the result you reported was **Sold or DNS** — never Not Interested, whatever the customer said.
- [ ] If it's a Not Qualified, Amy also got **which reason** — credit, doesn't own, out of area, or repair — not just "NQ."
- [ ] Committee was there but you never got to sell? That's an **Inc. Time**, not a No Show or One Leg.
- [ ] Rebooked on the spot? You reported **the result first, then the new date** — and you did not touch the old appointment or create the new one yourself.
- [ ] You qualified them in **discovery, before the demo** — credit, ownership, area, replacement vs. repair.
- [ ] The result you reported is the **real one**, not the flattering one.
- [ ] Product changed after sending? The existing estimate was **edited** — no second estimate.
- [ ] You added **no tags** and changed **no statuses or stages**. That's Amy's lane and the automation's.
